ADI Pro: test report

Tested 13 October 2026 · Web app https://webapp.drivingschoolsolutions.co.uk (phone-width view, signed in as Grant Robery, ADI Pro tier) · Code at main, including PRs #38–#50

Summary

No blocking bugs found. Every instructor screen I opened loaded real data, with no spinner stalls and no browser console errors. The automated checks pass apart from one timing flake. I found **4 small issues** to look at (section 4) and several things I could **not** test from a desktop browser (section 5). I changed no data.

1. Automated checks

Check	Result	Notes
Unit and screen tests (Jest)	**366 / 367 pass**	One failure, the School Profile "gives up on a stalled load" test. It passed when re-run alone, so it appears to be a timing flake when the whole suite runs in parallel. Not confirmed.
TypeScript type check	**Pass**	No errors.
Lint	**Cosmetic errors**	Unescaped apostrophes in text (react/no-unescaped-entities). They do not affect how the app runs.
Browser console	**No errors**	Checked after visiting about 25 screens.

2. Screens checked in the live web app

Screen	Result	What I saw
Home	**Pass**	Dashboard, referral code, month-to-date figures, "where students need help", bottom bar.
Profile	**Pass**	Grouped under My business, Teaching, Compliance, Diary & students, Account. No Sign Out row. "My details" expands to Name, ADI number, Mobile, Email, Address and Save. No chevron next to the name.
School Profile	**Pass**	Loads fine (the spinner problem did not recur). Business details, price, Google review link, Pupil agreement checklist, four refund policies with the wording pupils will read.
Bottom bar highlight	**Pass**	On Students the Students icon is orange (255,107,0) and the others are grey.
Students list	**Pass**	3 pupils with correct status labels. Callum Goody shows PASSED. Filters and tile counts are consistent.
Student profile (Callum Goody)	**Pass**	Status PASSED. Test outcomes (practical and theory, 28 Sept), mock test history and Pupil Agreement card ("NOT SIGNED") all show.
Competency tab	**Pass**	All DVSA categories listed with a level and percentage.
Diary	**Pass**	Day, Week and Month views, Block time, Add lesson. No lessons today.
Pricing & packages	**Pass**	8 packages with prices and per-hour rates.

Gift vouchers	**Pass**	2 active vouchers with Share PDF, Mark redeemed and Cancel buttons.
Deadlines	**Pass**	The Due date field is a real calendar input (type=date). This confirms the date-picker fix.
Standards check, Unavailabilities, Vehicles, Syllabuses, Lesson note questions	**Pass**	All load. Vehicles shows VW Golf as default. The three default note questions are present.
Income & expense report	**Pass (screen only)**	Date range and quick ranges show. I did not generate a CSV.
Receipts	**Pass**	Empty state and categories show.
Subscription / Pricing	**Pass**	Starter, ADI Pro (current) and Franchise tiers, with prices.
Owner dashboard	**Pass**	Revenue, test performance, performance card.
Theory test, Show Me / Tell Me, DL25 mock test	**Pass**	Content and controls render. The theory test shows 10 questions; 21 official Show Me/Tell Me questions are listed.
Privacy policy, Terms of service, Sync status	**Pass**	Load. Sync shows "Connected, 0 pending".
Wallet (pupil screen)	**Pass**	As an instructor it correctly says no student profile is linked.

3. Fixes from this session, verified

Fix	Result
Orange highlight on the current bottom-bar icon	**Verified live**
Calendar for deadline dates	**Verified live (Deadlines). The Standards check log was not opened.**
One "My details" in Profile (old My Details and Instructor Profile screens removed)	**Verified live**
Refund policy and Google reviews on School Profile	**Verified live**
Callum Goody shows Passed	**Verified live**
School Profile no longer spins forever	**Loads normally; the timeout and retry message were covered by unit tests only**

4. Issues found (all minor)

#	Where	Issue
1	Owner dashboard vs Home	Home says "3 lessons" this month; the owner dashboard says "1 lesson" and "-92% vs last month". The two screens probably count differently (booked and completed vs completed only). Needs checking so the numbers agree.
2	Owner dashboard	On a solo ADI Pro plan it shows a "Needs attention: Instructor seat limit reached" alert at 1 of 1 seats. That is a normal state, so the alert is noise.
3	Pricing	The tier card says "+ £9.99 per additional instructor" but the footnote says "£10". They should say the same.

4	Student profile (passed pupil)	Callum is PASSED but still shows "Driving readiness 40%", "I've arrived" and "Record route". Consider hiding those for passed pupils. Also his readiness counts lessons against "Minimum 25 lessons" with only 2 recorded, which is a data quirk.
5 (info)	Pricing	"Active students 2 / Unlimited" while Home and Students show 1 active. Probably it counts waitlist or test-ready pupils too.

5. Not tested

Area	Why
Pupil flow: invite email, set password, sign Pupil Agreement, "Agreed by …" on the instructor side	Needs a fresh pupil email and you opening the invite link. Still outstanding.
Lesson tools sheet (single preferred map button)	It opens from a lesson, and there are no lessons booked today.
Fingerprint sign-in, logout this device only, sign-in bounce fix	Needs the Android app and signing in or out, which I can't do for you.
Contacts import, route recording	Phone-only. You confirmed route recording works.
Creating or editing data: add lesson, cancellation charge, add or deduct hours, unavailability blocks, saving School Profile, saving My details	I deliberately made no changes to your data.
PDF invoice and voucher output, CSV export, Stripe checkout, emails (Resend), Google review request, calendar feed	Needs real sending or downloads. I did not trigger them.
Sign-up, login and password-reset screens	I stayed signed in so the session wasn't lost.

6. Suggested next steps

1. You run the pupil agreement test with a fresh plus-tag email, as planned.
2. Test the new Android build for the phone-only items in section 5.
3. Say the word and I'll fix issues 1–4 above.
